

**4 TIMES MORE THAN 70 METER - CO-OPERATIONS WITH
A NORTHERN GERMANY YACHT SHIPYARD**

By order of a well-known northern German yacht shipyard, beiderbeck designs accompanies the construction of sail and motor yachts. The fourth project over 70m is already up and running. Lüdeling and Beiderbeck create designs and take on the project management and the construction supervision for sail and motor yachts, which are built at the shipyard.

The co-operation between the shipyard and the service office of beiderbeck designs started with the refit and the complete reconstruction of the sailing yacht PHOCEA. beiderbeck designs was first delegated by the owner to take care of the interior design. They then received the assignment to take over the construction supervision and to co-ordinate the sub-contractors. For this project there was even a design prize for the best refit.

Two motor-yachts followed. beiderbeck designs took over the project management for the set-up as well as designing the service and crew areas. In this case, it was an advantage that the technical and construction supervision as well as the design arrangement were done by one and the same. For beiderbeck designs makes sure that the installation can be carried out simply, efficiently and neatly, even during the design phase. Thus, both the owner and the shipyard save time and money.

At this point, beiderbeck designs is entrusted with the project management for the furnishings of an 80m sailing yacht. As in other projects, the folks from Bremen arrange for all documents concerning inquiries to suppliers, get offers for the furnishings and they technically evaluate them. From order delegation up to the final acceptance, beiderbeck designs co-ordinates, supervises and accompanies the construction and manufacture and assembly direct on location.
