

SUPPORT FOR DESIGNER AND SHIPYARDS

beiderbeck designs considers itself a service company for all areas. For this reason, the office in Bremen not only offers owner representation, own design and construction, they also support shipyards and other designers during their daily tasks.

Designer-Support

Designers can get assistance on maintaining the original general plan while transacting the order. beiderbeck designs works all changes into the concept and completes a general plan for the customer up until the yacht can be delivered. Some designers have so little time, that they are unable to deliver the required technical designs for the furnishings to either the shipyard or their subcontractors. beiderbeck designs also takes care of this, according to the creative suggestions of the designers, as well as delivering the detailed drawings for the outside areas, such as the teak decks, deck furniture, rails, decks, layout in shipfront area, tender-stores, etc. Additionally, the Bremer designers create either independently or follow the suggested furnishing of several support areas – crew furnishings, galleys, stores, beach clubs, etc. – as well as taking over project management during the entire construction and building phases at the shipyard. This way they can take care of time-consuming detailed questions that come up during construction, with trade groups as well as negotiations between the parties. Many years of experience in yacht building and with the work and proceedings of the shipyards, helps beiderbeck designs to achieve the desired results.

Shipyard-Support

The service package for the shipyards is divided into three areas of support. beiderbeck designs knows exactly what each firm needs and can provide assistance. The company is flexible and can, at short notice, put together materials for their customers, which they will need for their offer presentations, i.e. yacht design drafts – 2D general plans in profile, in head-on views, front and back views, cross-sections, artists impressions of the different areas of the ship, inside views and 3D-presentations of the yacht with renderings in an agreeable environment, as well as the layout drawings for their own and outside designs, studies and drafts for yacht furnishings – walls and ceilings, furniture and decorative details. Additionally, the Bremer service providers prepare documents for the offer, contracts, general plans,

demarcation plans and specifications.

The construction department proposes to let beiderbeck designs prepare the general plans, to maintain these and continued communication with all sides. This includes tasks such as adjustments to the body and construction on the general structure, in order to avoid planning mistakes by either the designer or the shipyard, and the takeover of all construction states of the shipyards and suppliers in the GAP. beiderbeck designs creates net space plans for an exact planning arrangement, creates and constructs detailed solutions, furnishings, service areas – laundry, wheel-house – outside deck furniture, inside furniture, teak decks, rails, etc. beiderbeck designs supports project management with their team, because a shipyard can not always rely on in-house capacities. The Bremer office supplies documents related to the offer to the shipyard – renderings for offer illustrations and lists of rooms, plans the service areas of the yacht – galley, pantry, laundry – up to the announcement. They also deliver the plans, amount structure and list of manufacturers. Besides which, the Beiderbeck service also covers the drafting of demo-renderings for all communications with the owner and project management during the furnishing of the yacht and/or cruise ship.
